Email security made simple

Email is an essential part of life, whether at home, at work or on the move. We rely on it as a fast and efficient way to communicate and rarely consider what actually happens when we push send.

Email is carried across the public internet and travels in many directions and through many, unregulated, hands before it actually reaches the intended recipient. And if your email is not protected, it will travel through the internet like a virtual postcard; open to others along the way.

Do you think you are protected?

Email security is often confused with software packages which normally protect you against email spam and harmful viruses. These services do not protect your external email. If you don't have specific email security you could be publishing your information on the internet every time you send an email.

This creates a risk to anyone using email to communicate privileged, confidential or sensitive information; a risk that has, until now, been costly, time consuming, and beyond the reach of many businesses to resolve.

The Secure-mail service changes all that

It's the first service of its kind to bring email security within the reach of small to medium sized businesses, and to make the whole business of email security simple and easy. The price reflects the simplicity of this subscription based service, too; you get big company security for small company budgets.

The Secure-mail service uses encryption to protect email between sender and receiver as it travels across the internet.

Encryption is all about transforming information into an unreadable code. Encrypting your emails is just the same; it's like locking your information away with a secret key so it can only be unlocked and read by the person with the right key. That may sound complicated but it isn't.

We provide you with a Secure-mail hub (a small box that does the encrypting). You place it between your internet connection and your email server and from then on, it automatically and seamlessly encrypts emails between you and other Secure-mail users. It's as simple as that.

What's more, it only takes a few minutes to fit and doesn't require a degree in IT to do it. There's no software to integrate and it will work in almost all IT environments. All you need is the Secure-mail hub, an internet connection, and an email server.

And if you're emailing someone who doesn't subscribe to the service, we'll send them a free attachment to download, Secure-mail:lite, which decrypts and encrypts email from you – keeping you secure whoever you email.

So if you want to stop your emails from being like virtual postcards we can help you in no time at all.

Secure-mail is the right service for you

- If you use email to communicate with your customers or clients
- If your emails contain confidential information
- If you want to ensure the email you send can only be read by the intended recipient
- If you're concerned about emails sent over the internet

Key features and benefits of Secure-mail

- Free 30 day trial period
- No contract to sign or ongoing commitment
- Easy, self-installation
- Works in almost all IT environments
- No system downtime or configuration needed
- No software to load for Secure-mail hub users
- No change to your current ISP/email provider
- Uses the best available encryption methodology
- Affordable subscription with scaled discounts
- Referral discounts*

Next steps

- Go to www.securecoms.com
